

Slit Camera

Focal Spot Size

The Leeds Test Objects Slit Camera comprises a high density metal filter into which a fine slit has been machined. The width of the slit can be manufactured to suit your application (down to a minimum of 0.01mm) and the length of the slit is 10mm.

The overall dimensions of the slit camera are 55mm diameter and 7mm height.

Please contact us with your requirements or for further information.
